

AEMS manual testing guide

Special engagement → planning → entry conference → fieldwork → Issues and AFRs → exit conference → final report → CMS transfer

BPLD business permit assessment, collection and reconciliation

Prepared for AGIS local acceptance testing • 8 September 2026 • Version 1.0

Primary auditee: **Oxanna S. Custodio, BPLD Head**, Business Permits and Licensing Division. Maria L. Santos remains an additional BPLD representative; use Oxanna for this guide's recipient, custodian and responsible-person selections.

This is an executable manual test specification, not a report that the full journey has passed. Record actual results and defects as you run it. Workflow and field coverage were checked against the current repository's forms, request validation and transition services. Where a field is missing, a selector is empty or a gate rejects correct input, record a defect rather than altering the database to force a pass.

All business amounts, observations, policies, correspondence and attachments in this guide are **synthetic test fixtures**. Named accounts identify application test actors. The example finding is not an allegation about BPLD or any person. The fictional SOP is test criteria, not a statement of an actual ordinance or COA requirement.

Contents

- 01 · Test setup, dates and result recording
- 02 · Login accounts, permissions and ownership
- 03 · Lifecycle roadmap and record dependencies
- 04 · Create the special engagement
- 05 · Define BPLD scope and coverage
- 06 · Assign team and approve safeguards
- 07 · AEO approval, issuance and Oxanna acknowledgement
- 08 · Planning workspace draft and preliminary survey
- 09 · Objectives and structured process flows
- 10 · Audit Engagement Plan
- 11 · Audit Program and three procedure details
- 12 · Risk Matrix register and risk items
- 13 · KPIs, planned papers and planning approval
- 14 · Entry Conference: schedule, hold, notes and acknowledgement
- 15 · Start Fieldwork and activate the program
- 16 · Evidence request and Oxanna's CMS upload
- 17 · Audit evidence metadata, assessment and Working Papers
- 18 · Fieldwork Records and procedure completion
- 19 · Issue, AFR finding and recommendations
- 20 · Communicate AFR, management response and rejoinder
- 21 · Exit Conference: schedule first, actual details later
- 22 · Draft report and independent quality review
- 23 · Final report, authority, issuance and distribution
- 24 · CMS transfer, reconciliation and handoff acceptance
- 25 · Optional completion/closure and exception branches
- 26 · Negative, persistence and access regression matrix
- 27 · Troubleshooting and known verification boundaries
- 28 · Final run sheet and source index

01 · Test setup, dates and result recording

Use a fresh special engagement for each run. Do not reuse the earlier AEMS-2026-001 engagement: its versions, approvals and links may already be locked. Keep the generated engagement code and all generated record IDs in your run sheet.

The normal path below uses one audit program, three procedures, three process flows, three risk items, three working papers and three fieldwork records. It produces one finding with two recommendations and therefore two expected CMS cases. Each repeated form row has a defined value below.

Setup field	Value / instruction
Test run code	BPLD-UAT-20260908-A; replace date and suffix on repeat runs
Application	Your running AGIS local site; open the normal login page
T (test date)	Actual local date when running; example 2026-09-08
Authority date	T minus 1 day; example 2026-09-07
Planned engagement period	T through T+14; example 2026-09-08 to 2026-09-22
Expected report date	T+21; example 2026-09-29
Record request deadline	T+2; example 2026-09-10; must not be before today
Evidence obtained / work performed	T; evidence obtained cannot be a future date
Audit population period	2026-08-01 through 2026-08-31; historical transaction period, distinct from engagement dates
Recommendation target 1 / 2	T+30 / T+45; example 2026-10-08 / 2026-10-23
Conference scheduling	Schedule T at the next convenient time. Record actual held time only after the simulated meeting; use chronological real test times
Business data	60 fictional permit transactions, 12 sampled, 3 exceptions; use accompanying CSV and SOP fixtures
Browser sessions	Separate profiles/private windows for preparer, reviewer/approver and Oxanna, or sign out between actors
Status per test	NOT RUN, PASS, FAIL or BLOCKED
Evidence per test	Screenshot filename, generated record code, current version, acting account, timestamp, actual result and defect ID

A same-day demonstration may simulate all meetings and procedures on T, with future planned end dates. Do not claim that future events have occurred. For a calendar-realistic run, perform the steps over the planned period. Avoid future evidence dates simply to match planned dates.

For every save: wait for success, refresh, reopen the record and compare each input below. A toast alone is not proof of persistence. For every transition: verify status, actor, timestamp and history. System-generated codes, IDs, checksums, version numbers and lock versions are captured from the application; do not type example database IDs.

02 · Login accounts, permissions and ownership

On the login page click the demo account card to populate the employee ID and configured password, then click Sign in. The card is a credential selector. Local demo passwords default to 1a1a unless overridden by environment configuration. Use the card's configured value rather than assuming a deployed password.

Actor / account	Use in this run
Oxanna S. Custodio — BPLD-HEAD	Main auditee; BPLD office. AEO acknowledgement, entry notes, requested evidence upload and responsible person for recommendations
Maria L. Santos — AUDITEE-001	Secondary BPLD representative; use in recipient-scope checks, not as the main custodian
Marissa Barcellona — CIAS-AUD-004	Engagement Team Leader; prepare AEO, AEP, program and report
Charry Bagongon — CIAS-AUD-001	Auditor; execute all three procedures and prepare working papers / fieldwork records
Kristine Yare — CIAS-AUD-002	Reviewer; independent reviews where permissions and engagement assignment allow
Cherrybelle A. Lao — CIAS-HEAD-001	Supervisor and approval/finalization actor where granted permissions allow
Michele Dampog — CIAS-AUD-003	Additional independent issuer/approver if an action requires a different person; assign and grant relevant permission before use
Kim V. Lao — AGIS-ADMIN-001	Test account/permission configuration; administrative role alone does not confer audit approval

Precondition: use Administration → roles/permissions to inspect the actual allowed actions. Titles are examples of responsibility, not authorization rules. A reviewer needs the relevant review permission and engagement scope; an approver needs the relevant approve/finalize permission. Team roles must be assigned within this engagement.

Capability	Permission family / expected restriction
Registry, scope and lifecycle	<code>aems.engagement.*</code> , foundation scope permissions; use the named permission shown by the relevant screen
Team and safeguards	<code>aems.team.*</code> ; current approved ARMIS capacity and accepted independence declarations
AEO / AEP / Program	<code>aems.aeo.*</code> , <code>aems.aep.*</code> , <code>aems.program.*</code>
Planning package	<code>aems.planning-package.*</code>
Fieldwork	<code>aems.fieldwork.create</code> , <code>aems.fieldwork.review</code> , <code>aems.fieldwork.finalize</code> , plus view permission
Evidence and Working Papers	<code>aems.evidence.*</code> , <code>aems.evidence-request.*</code> , <code>aems.working-paper.*</code>
Auditee evidence response	<code>aems.evidence-request.view</code> , <code>aems.evidence-request.respond</code> , <code>access.auditee_scope</code> ; office/user recipient checks still apply
AEO acknowledgement	<code>aems.aeo.acknowledge</code> ; exact recipient office/user must match
Own-submission exception	Explicit self-review/self-approval permission, where supported. Never infer it from CIAS Head title. Use independent actors for the main run
Findings, dialogue, reports	Relevant <code>aems.issue.*</code> , finding, management-response, rejoinder and report permissions exposed in the permission registry

Capability	Permission family / expected restriction
Completion reconciliation	aems.completion-transfer.view, .reconcile, .approve; independent approval may still be required

LOGIN-01: click Oxanna's card, sign in, confirm Oxanna's name and BPLD office. Open CMS. Expected: authorized CMS pages load and other offices' records remain hidden. Log out and confirm protected pages require login. Do not modify Maria's identity to imitate Oxanna.

03 · Lifecycle roadmap and record dependencies

Order	Required result before moving forward
1. DRAFT	Special authority and exactly one auditee office with area/focus coverage saved
2. AUTHORIZATION_PREPARATION	Required team, safeguards and current AEO prepared/reviewed/approved
3. AUTHORIZED	Issue Authorization gate passes; issue and transmit AEO, obtain BPLD acknowledgement
4. ENGAGEMENT_PLANNING	Create planning draft first; approve AEP and program, complete planning traceability and approve package
5. ENTRY_CONFERENCE	Start Entry Conference; schedule, hold, record notes, complete/acknowledge
6. FIELDWORK	Start Fieldwork; separately activate approved audit program; receive evidence, assess, approve papers, finalize records, complete procedure progress
7. FINDINGS_COMMUNICATION	End Fieldwork; resolve issues, communicate AFR, receive/dispose response and finalize findings
8. EXIT_CONFERENCE	Start Exit Conference only after issues are dismissed/converted and current findings finalized; schedule then complete
9. REPORTING	Completed exit conference and reporting gates; draft review then final approval/issuance
10. ISSUED / Completion & Transfer	Transfer issued recommendations once, verify CMS cases, reconcile transfer and resource effort

Always execute lifecycle actions from the engagement's Overview/Lifecycle workspace when child records are ready. Completing a child document does not guarantee the aggregate automatically advances. Reload the allowed actions and read each blocker.

Planning's initial "Blocked" label concerns fieldwork readiness. It is expected before planning approval; a planning draft does not need an already-created Audit Program. Execution can be in FIELDWORK while the approved program has not yet been activated; that explains empty procedure lists.

04 · Create the special engagement

ENG-01 — Actor: Marissa or another permitted engagement creator. Navigation: AEMS → Audit Engagement Workspace → Create special engagement. Use these registry fields; complete the dedicated Scope screen next.

Field	Input
Engagement code	Leave blank for automatic code. Record the returned value
Title	BPLD-UAT-20260908-A — Special Audit of Business Permit Assessment, Collection and Reconciliation
Source type	Special (system sets this for special creation)
Special authority reference	DEMO-MO-2026-091
Special authority type	Mayor Directive / MAYOR_DIRECTIVE if available
Special authority class	SPECIAL
Authority date	T-1
Approving authority / Approved by	City Mayor, selected from available users; documentary source authority is separate from application approver
Audit type	Compliance Audit, or the configured compliance-audit label
Engagement approach	Risk-based, using the configured matching option
Background	A synthetic August 2026 register contains 60 permit transactions. Management requests assurance that assessment, official-receipt recording and daily reconciliation controls operate consistently.
Objectives	Determine whether assessment computations are accurate, recorded receipts agree to assessments, and daily reconciliation differences are identified and resolved.
Scope	BPLD records for 1–31 August 2026 covering assessment, receipt references retained by BPLD, and daily reconciliation of permit transactions.
Exclusions	Treasury-wide cash custody, bank confirmation, procurement, payroll and periods outside August 2026 are excluded. Treasury source copies are used only to corroborate BPLD records.
Planned start / end	T / T+14
Expected report date	T+21
Planned person-days	26
Office / audit areas / focuses if shown here	BPLD / REVENUE / REV-ASS, REV-COLL, REV-REC; dedicated Scope page remains the authoritative coverage step

Save and reload. Expected: DRAFT, special-source lineage preserved, correct dates and 26 days. Objectives/scope/exclusions must display your text. If any field is unavailable, capture the missing control and the resulting “Not specified” as a defect; do not silently treat empty content as tested.

Upload `BPLD-UAT-criteria-and-authority.txt` into Document Management if a source-document control is available. Record its actual Core Document Version. It is conspicuously marked synthetic and must not be represented as a genuine mayoral directive.

05 · Define BPLD scope and coverage

SCOPE-01 — AEMS → Audit Scope; select the new engagement. Save while scope is editable, before authorization.

Field	Input
Engagement Office	BPLD — Business Permits and Licensing Division; exactly one
Scope boundaries	Assessment-to-reconciliation records for 60 August 2026 permit transactions; include BPLD's retained receipt and reconciliation references.
Known limitations	Synthetic records only; no real taxpayer records or independent bank confirmations. Findings are limited to the 12 sampled transactions.
Source variance decision	NOT_APPLICABLE — special engagement has no imported IAP baseline
Variance authority	DEMO-MO-2026-091
Variance explanation	No IAP source is imported. Coverage follows the special directive and is confined to BPLD.
In-scope Audit Areas	REVENUE — Revenue, Tax, Permit and Fee Administration
Audit Focuses	REV-ASS — Assessment and Billing; REV-COLL — Collection and Official Receipts; REV-REC — Revenue Reconciliation
Area objective	Evaluate accuracy, completeness and timely reconciliation of BPLD permit assessment and receipt records.
Area boundary	BPLD assessment worksheets, receipt-reference register and daily reconciliation files for August 2026.
Area limitations	No assurance over Treasury operations outside the BPLD record trail.
Area source variance	Not applicable — coverage established directly by DEMO-MO-2026-091.

Expected: one office, one area, three focuses persist after refresh. Other areas' focuses cannot be selected. Switch to Overview/Lifecycle → Prepare Authorization; expected AUTHORIZATION_PREPARATION. Team workspace should now unlock.

06 · Assign team and approve safeguards

TEAM-01 — AEMS → Audit Team. For every assignment set assigned from T, until T+14. Select the user and role from the application's lists. The named team is independent of auditee Oxanna.

User / assignment role	Planned days / assignment notes
Cherrybelle A. Lao / SUPERVISOR	4 / Supervise scope and approve controlled outputs within granted authority.
Marissa Barcellona / TEAM_LEADER	6 / Coordinate survey, planning, conferences and report preparation.
Charry Bagongon / AUDITOR	12 / Execute PROC-01, PROC-02 and PROC-03; prepare work and evidence trail.
Kristine Yare / REVIEWER	4 / Independently review planning and execution support.

For optional assignment Reason enter "Initial team established for BPLD-UAT-20260908-A." Amendment authority and consequence assessment remain blank for initial assignments. In the amendment branch use authority "DEMO-TEAM-AMEND-01", reason "Auditor unavailable for the remaining test period" and consequence "Reallocate remaining work; reassess safeguards and capacity before proceeding."

ARMIS is the resource source. If an assignee lacks approved availability/capacity/competencies for T..T+14, record BLOCKED, resolve the actual ARMIS setup, then reassess. Merely entering 26 days into AEMS does not satisfy provider checks. Do not change provider authority or disable gates to make this test pass.

TEAM-02 — Each team member submits all required declaration types. Repeat the following for OBJECTIVITY, CONFLICT_OF_INTEREST and INDEPENDENCE.

Declaration field	Input
Type	OBJECTIVITY, then CONFLICT_OF_INTEREST, then INDEPENDENCE
Outcome	CLEAR, only for this fictional test scenario
Statement	I have no personal, financial or operational involvement in the BPLD records used in this synthetic test and can perform my assigned work objectively.
Mitigation plan	Blank for CLEAR; branch DISCLOSED uses "Reassign the affected procedure and document independent review."
Evidence Document Version	Optional: actual uploaded declaration fixture version; otherwise blank
Revision reason	Blank initially; if returned: "Clarified the period and scope covered by the declaration."
Reviewer decision / notes	ACCEPT / Reviewed the declaration for the engagement period; no disclosed conflict in the test scenario.
Assessment approval comment	Team declarations and current ARMIS suitability checks reviewed; required assignments are ready.

Generate/assess safeguards, then use an eligible independent approver. Expected: required declarations accepted and current assessment approved. Missing/stale provider information or any unresolved conflict must block authorization/fieldwork.

07 · AEO approval, issuance and Oxanna acknowledgement

AEO-01 — AEMS → Engagement Orders → Create. Marissa prepares; Kristine reviews; Cherrybelle approves subject to permissions and separation rules.

Field	Input
Authority	DEMO-MO-2026-091, dated T-1, authorizes a synthetic special audit of BPLD permit controls.
Objectives	Verify accurate assessment, complete receipt references and documented reconciliation for August 2026 permit records.
Scope	BPLD assessment-to-reconciliation records; 60 transactions, 12 risk-selected samples; exclusions as saved in engagement definition.
Effectivity date	T
Planned start / end	T / T+14
Change reason	Blank initially; revision: "Clarified audit period and BPLD-only coverage."
Submit comment	AEO ready for independent review against the special authority and scope.
Review comment	Authority, one-office coverage, dates and team responsibilities agree to the engagement.
Approval comment	Approve this reviewed AEO version for the BPLD test engagement.
Signature method if prompted	IN_APP_ATTESTATION
Signature reference	DEMO-AEO-ATTEST-01

Save → Submit → Record review → Approve the AEO. From Lifecycle run Issue Authorization to move from AUTHORIZATION_PREPARATION to AUTHORIZED; the current active AEO must be APPROVED or ISSUED. Then issue and transmit the AEO using an appropriately permitted actor. Start Planning becomes available once the issued AEO's current version has been acknowledged by the engagement office or a recipient belonging to that office. Verify the aggregate lifecycle and child AEO status separately; one does not automatically advance the other. Authorizing your own engagement still requires the explicit own-submission review permission.

AEO-02 — Transmit the issued version.

Distribution field	Input
Recipient type	USER
Recipient user	Oxanna S. Custodio — BPLD-HEAD
Recipient office if enabled	BPLD
Recipient name if enabled	Oxanna S. Custodio
Transmittal method	SECURE_PORTAL
Reference	DEMO-AEO-TX-01
Acknowledgement note	Received the issued AEO for BPLD. Oxanna S. Custodio will coordinate records and conference attendance.

Sign in as Oxanna → CMS → AEO Acknowledgements → select the exact transmittal → acknowledge. Refresh as auditor; acknowledgement actor/date must be present. Download the issued AEO PDF and check office, scope, code and version. Lifecycle → Start Planning must now pass; a missing auditee acknowledgement must block it.

08 · Planning workspace draft and preliminary survey

PLAN-01 — AEMS → Planning Workspace → select engagement → Create draft. Create it before Audit Program if needed. Do not interpret fieldwork-blocked status as a prohibition on draft creation.

Preliminary Survey field	Input
Purpose	Understand BPLD assessment, receipt-reference and reconciliation controls and identify procedures for August 2026 testing.
Background	Synthetic register contains 60 permit transactions; manual reviewer sign-off supports daily reconciliation.
Information sources	BPLD-UAT-permit-register.csv; BPLD-UAT-criteria-and-authority.txt; walkthrough and interview notes.
Interviews	Oxanna S. Custodio explained record ownership, assessment review and daily reconciliation responsibilities on T.
Walkthroughs	Traced DEMO-PERMIT-005 from application to assessment, receipt reference and reconciliation; observed missing secondary sign-off.
Observations	Daily records contain three sampled items without reviewer sign-off; other sample attributes are populated.
Planning implications	Test assessment calculations, receipt matching and independent reconciliation review separately; preserve sample-level exceptions.
Core Document Version ID	Optional actual uploaded survey/support version; otherwise leave blank, since narrative is supplied

Planning attribute field	Input
Methodology	Risk-based walkthrough, inspection, recalculation and reconciliation using 12 selected transactions.
Criteria framework	Synthetic SOP BPLD-UAT-SOP-01, sections 1–3, supplied with this guide.
Evidence requirements	Controlled register export, assessment and receipt references, reviewer sign-off and documented interview corroboration.
Milestones	Planning approval; entry conference; 3 procedures finalized; AFR dialogue; exit conference; final report; CMS transfer.
Schedule	Planning and entry T; fieldwork T..T+14; final report planned by T+21.

Save a new version and reopen. Record version number. Initial risks/program links may still be incomplete; finish sections 09–13 before approval.

09 · Objectives and structured process flows

PLAN-02 — Add each objective. Source type: SPECIAL where offered, otherwise keep the form's supported default and enter the authority in Source reference. Do not type an unsupported option.

Objective code	Statement / source reference
OBJ-01	Determine whether permit assessments are correctly computed. / DEMO-MO-2026-091; SOP section 1
OBJ-02	Determine whether BPLD receipt references completely match permit assessments. / DEMO-MO-2026-091; SOP section 2
OBJ-03	Determine whether daily reconciliation exceptions receive documented independent review. / DEMO-MO-2026-091; SOP section 3

PLAN-03 — Add three process flows using this template. Each list field receives one entry per line. Save flows before selecting them in procedures/risk items.

Flow field	FLOW-01 value
Flow code / Title	FLOW-01 / Permit assessment and billing
Process owner office	BPLD
Audit area / focus	REVENUE / REV-ASS
Core Document Version ID	Blank; use narrative and source reference
Source reference	BPLD-UAT-SOP-01 section 1
Scope statement	August 2026 BPLD assessment records for 60 synthetic permit transactions.
Description / narrative	Intake validates application; assessor computes the test fee; reviewer checks arithmetic; billing reference is recorded.
Steps	Receive application; validate classification; calculate fee; independent arithmetic check; release assessment.
Inputs	Application reference; test fee schedule; declared classification.
Outputs	Assessment amount; billing reference; reviewer approval.
Records / systems	Synthetic permit register; assessment worksheet.
Controls	CTRL-01: independent recomputation before release.
Decision points	Is the application complete? Does the computed fee agree to the test schedule?
Risk points	Incorrect classification; calculation error; missing reviewer check.
Limitations	Synthetic workflow only; excludes unrelated charges.

For FLOW-02 and FLOW-03 replace every process-specific field below; retain BPLD owner, REVENUE area, August population and blank Core version.

Field	FLOW-02 / FLOW-03
Title / focus	Receipt-reference matching / REV-COLL; Daily reconciliation review / REV-REC
Source reference	SOP section 2 / SOP section 3

Field	FLOW-02 / FLOW-03
Scope statement	BPLD retained receipt references for August permits / BPLD daily reconciliation evidence for August permits
Description	Match receipt reference and amount to assessment before release / Reconcile assessment and receipt records, investigate differences and obtain secondary sign-off
Steps	Receive receipt reference; match permit; compare amount; record receipt / Extract daily list; match totals; investigate differences; reviewer signs; archive
Inputs	Assessment amount; receipt copy / Assessment register; receipt-reference register
Outputs	Matched receipt entry; exception list / Signed reconciliation; resolved exception record
Records / systems	Synthetic permit register and receipt copies / Synthetic reconciliation review register
Controls	CTRL-02: one-to-one assessment and receipt matching / CTRL-03: independent reconciliation sign-off
Decision points	Does receipt match amount and permit? / Are differences explained and independently reviewed?
Risk points	Missing or duplicate reference; mismatch / Unreviewed exceptions; delayed follow-up
Limitations	No independent Treasury-wide cash opinion / No external bank confirmation

Save/reload. All three scoped focuses must be selectable. Record a defect if selecting REVENUE produces "No audit focuses" despite saved scope.

10 · Audit Engagement Plan

AEP-01 — AEMS → Engagement Plan. Create and approve the AEP before final planning-package approval.

Field	Input
Objectives	OBJ-01 assessment accuracy; OBJ-02 receipt completeness; OBJ-03 documented independent reconciliation review.
Scope	BPLD August 2026 assessment, receipt-reference and reconciliation records; 60 transactions and 12 selected samples.
Exclusions	Treasury-wide cash custody, external bank confirmation, procurement, payroll and other periods.
Methodology	Walkthrough and interview; recalculate 12 assessments; match receipts; inspect independent reconciliation sign-off; corroborate exceptions.
Audit criteria	BPLD-UAT-SOP-01 sections 1, 2 and 3; synthetic acceptance-test criteria.
Materiality	Assess control significance qualitatively. Report missing review separately from monetary error; do not project sample exceptions to the whole population.
Sampling approach	Judgmental sample of 12 IDs: 005, 010, 015, 020, 025, 030, 035, 040, 045, 050, 055 and 060. No statistical projection.
Planned start / end / expected report	T / T+14 / T+21
Planned person-days	26
Staffing	Supervisor 4, Team Leader 6, Auditor 12, Reviewer 4 person-days.
Skills	Permit assessment review, spreadsheet recalculation, record matching and internal-control testing.
Tools	AGIS, spreadsheet application and private document storage.
Logistics	BPLD conference room; read-only synthetic exports; no real taxpayer data.
Contact person	Oxanna S. Custodio
Contact details	bpld.test@example.invalid — synthetic contact; do not send external email
Kickoff details	Entry conference on T after planning readiness; confirm BPLD records coordinator and sample scope.
Records deadline	T+2
Coordination notes	Submit requested files using CMS Evidence Requests; maintain original filenames and request links.
Confidentiality	Internal
Change reason	Blank initially; return branch: "Expanded sampling description to identify all 12 items."

Save → Submit → independent Review → Approve. Use descriptive comments: "Sampling, criteria, scope and resources reconciled to approved authority." Reopen the approved version and verify all fields. A formal revision must preserve the old version and require reapproval where applicable.

11 · Audit Program and three procedure details

AP-01 — AEMS → Audit Program → Create. Keep one current program for this run.

Program field	Input
Title	BPLD August 2026 permit controls — UAT program
Objective	Execute OBJ-01 through OBJ-03 and preserve evidence-backed conclusions for each.
AEP source	Select the current approved AEP if editable; otherwise verify automatic link
Audit area / type	REVENUE / Compliance Audit
Audit period start / end	2026-08-01 / 2026-08-31
Audit criteria	BPLD-UAT-SOP-01 sections 1–3.
Risk statements, one per line	R-01 inaccurate assessment; R-02 unmatched receipt; R-03 unreviewed reconciliation.
Sampling approach	12 judgmental samples from 60 transactions; IDs at increments of five.
Planned working-paper requirements	WP-01 assessment recalculation; WP-02 receipt matching; WP-03 reconciliation review.

AP-02 — AEMS → Audit Procedure Details → select engagement/program → Add procedure. Repeat the full template for three rows.

Procedure field	PROC-01 input
Procedure code / sequence	PROC-01 / 1
Objective	Verify assessment accuracy for the 12 sampled permits.
Procedure description	Recalculate the synthetic assessment amount for each selected ID and compare it with the recorded assessment. Investigate differences.
Expected evidence	Synthetic permit register, stated test-fee formula and recalculation results.
Assigned auditor	Charry Bagongon
Target date	T+7
Working-paper reference	WP-01
Audit area / focus	REVENUE / REV-ASS
Process name	Permit assessment and billing
Process flow	Select saved FLOW-01; if the screen still asks for an ID, use the actual saved flow ID, never a fabricated number
Audit method	Inspection and recalculation
Planned person-days	4
Procedure criteria	SOP section 1: test fee must equal PHP 1,000 plus PHP 100 multiplied by transaction number.
Sampling method	Judgmental, 12 items at increments of five
Population	60 synthetic August 2026 permit transactions
Sample size	12

Procedure field	PROC-01 input
Planned Working Paper reference	WP-01
Required evidence	Register rows and recalculation worksheet for the 12 IDs.
Risk statement IDs if displayed	Select R-01 / use the risk code offered by the form

Replacement field	PROC-02 / PROC-03
Sequence / working-paper reference	2 / WP-02; 3 / WP-03
Objective	Verify receipt completeness and amount agreement / Verify independent reconciliation review
Description	Match each sample's receipt reference and amount to the permit assessment / Inspect reconciliation and reviewer sign-off for all 12 selected IDs; list missing sign-offs
Expected / required evidence	Receipt-reference and amount columns plus assessment entries / Reconciliation reference, reviewer field and confirmation of three exceptions
Focus / process flow	REV-COLL / FLOW-02; REV-REC / FLOW-03
Process name	Receipt-reference matching / Daily reconciliation review
Audit method	Inspection and matching / Inspection and inquiry
Criteria	SOP section 2: unique receipt reference and matching amount / SOP section 3: independent reviewer sign-off on every reconciliation
Target date / days	T+10 / 4; T+14 / 4
Sampling method / population / size	Same 12-ID judgmental sample / 60 transactions / 12, for both
Risk statement	R-02 / R-03

Keep the assigned auditor Charry for all three. Submit, review and approve the program once procedures are complete. Expected: APPROVED, three saved procedures with all classifications and sampling details. Activation is performed after Start Fieldwork (section 15), not assumed from approval.

12 · Risk Matrix register and risk items

RISK-01 — Planning Workspace → Risk Matrix. Use one register matrix covering REVENUE, with three risk items differentiated by focus.

Matrix register field	Input
Matrix code / title	RM-01 / BPLD permit controls risk matrix
Audit area	REVENUE
Audit focus	Blank for the area-wide matrix; individual items carry specific focuses
Methodology	Synthetic 5×5 likelihood-impact model. Score = likelihood × impact. Low 1–4, Moderate 5–9, High 10–16, Critical 17–25. Assess controls before setting residual risk.
Risk appetite	Low tolerance for inaccurate billing, unmatched receipts and unreviewed reconciliations.
Overall conclusion	Prioritize reconciliation review; test assessment and receipt controls to determine whether weaknesses are isolated or recurring.

RISK-02 — Add each risk item. Use REVENUE area and BPLD responsible office for all. Numbers follow the synthetic rubric, not an assertion about an official approved risk model.

Field	R-01
Risk code / category / status	R-01 / Revenue accuracy / OPEN
Risk statement	Incorrect assessment calculations may result in inaccurate permit billing.
Audit focus / flow / process	REV-ASS / FLOW-01 / Permit assessment and billing
Risk area	Assessment computation
Responsible office	BPLD
Risk response	Reduce
Inherent likelihood / impact / score	3 / 4 / 12
Control description	CTRL-01 independent recomputation before assessment release.
Control effectiveness	Partially effective — to be validated by sample testing.
Residual likelihood / impact / score / rating	2 / 3 / 6 / Moderate
Planned audit approach	Recalculate all 12 selected assessments and document discrepancies.
Criteria	BPLD-UAT-SOP-01 section 1
Response rationale	Independent checking should reduce arithmetic error; obtain operating evidence.
Linked planning objectives	OBJ-01 from current package version
Linked approved-program procedures	PROC-01
Working-paper references	WP-01; link basis if requested: Recalculation supports assessment-risk conclusion.

Replacement field	R-02 / R-03
Category	Receipt completeness / Reconciliation oversight

Replacement field	R-02 / R-03
Risk statement	Missing or mismatched receipt references may leave billing unsettled in BPLD records / Missing independent review may allow reconciliation errors to remain undetected
Focus / flow / process	REV-COLL / FLOW-02 / Receipt-reference matching; REV-REC / FLOW-03 / Daily reconciliation review
Risk area	Assessment-to-receipt matching / Independent reconciliation review
Inherent likelihood, impact, score	3, 4, 12 / 4, 4, 16
Control	CTRL-02 one-to-one reference/amount check / CTRL-03 secondary sign-off and exception follow-up
Control effectiveness	Partially effective, pending test / Weak evidence of independent review in survey
Residual likelihood, impact, score, rating	2, 3, 6, Moderate / 3, 4, 12, High
Response / rationale	Reduce; test completeness of matching / Reduce; prioritize evidence of secondary review
Approach	Match references and amounts for 12 items / Inspect reconciliation review for the 12 items
Criteria	SOP section 2 / SOP section 3
Objective / procedure / paper links	OBJ-02 / PROC-02 / WP-02; OBJ-03 / PROC-03 / WP-03
Working-paper relationship basis	Receipt match supports completeness conclusion / Sign-off test supports oversight finding

RISK-03 persistence regression: Save new version, refresh and switch tabs away/back. Confirm methodology, appetite and overall conclusion remain verbatim, along with all three items and links. Add an optional second matrix RM-02 titled "Reconciliation focus supplement", REVENUE / REV-REC, using the same rubric, appetite "Low tolerance for missing secondary review" and conclusion "Track reviewer sign-off exceptions." Save/reload; both matrices must retain independent text. An optional matrix can remain without items if the server permits; do not create a duplicate R-03 merely to populate it.

13 · KPIs, planned papers and planning approval

PLAN-04 — Add the following KPIs. Where offered, responsible office is CIAS (City Internal Audit Office), status is the form's active/default value and source reference is the program code.

Code / name	Target / measurement method
KPI-01 / Sample testing completion	12 of 12 per procedure / Count documented tested sample IDs against 12 in each approved paper
KPI-02 / Procedure completion	3 of 3 / Count finalized fieldwork records and completed program procedures
KPI-03 / Findings disposition	100% / Finalized current findings divided by current communicated findings

Add these planned Working Papers. These are requirements, not actual execution papers; actual papers are created in section 17.

Reference / procedure	Title / objective / required evidence
WP-01 / PROC-01	Assessment recalculation / Verify OBJ-01 / Register and 12-item recalculation worksheet
WP-02 / PROC-02	Receipt matching / Verify OBJ-02 / Register and 12 receipt references with amounts
WP-03 / PROC-03	Reconciliation sign-off testing / Verify OBJ-03 / 12 reconciliation records and missing-sign-off exception list

Risk item selector, if shown: use matching R-01/02/03. Required flag: checked for all. Sequence: 1/2/3. Save with change reason "Completed program, risk, KPI and planned-paper traceability."

Readiness & Review must show complete survey, objectives, structured flows, area coverage, approved AEP/program, risk-to-objective/procedure/paper links, complete program/procedure definitions, KPIs and planned evidence. Resolve each failed check by editing the actual source before submitting.

Submit as preparer; independent Review; Approve as authorized approver. Expected approved version equals current version and fieldwork readiness is true. Compare Versions before/after and check text retention. If editing a process flow creates new IDs, refresh and reselect the current links; do not reuse IDs copied from another engagement.

Lifecycle → Start Entry Conference. Expected ENTRY_CONFERENCE. Any configured progress-assessment control must later receive its required completion status and evidence reference before reporting. If your UI lacks a control requested by a server gate, record that specific gap as BLOCKED.

14 · Entry Conference: schedule, hold, notes and acknowledgement

ENTRY-01 — Conference Management → Entry. First schedule without claiming the conference has already happened.

Scheduling / participant field	Input
Scheduled start / end	T at agreed time / 60 minutes later
Venue	BPLD meeting room — synthetic test session
Meeting link	Blank for in-person session; optional URL branch uses https://example.invalid/bpld-uat
Online meeting details	Blank in-person; URL branch: Synthetic link only, no external meeting is launched.
Agenda	Authority and scope; objectives and sample; records access; confidentiality; timetable and contacts.
Participant 1 type / user / office / role	AUDIT_TEAM / Marissa / CIAS / Team Leader
Participant 2	AUDIT_TEAM / Charry / CIAS / Auditor
Participant 3	AUDITEE / Oxanna / BPLD / BPLD records coordinator
External name / email	Blank for registered users; optional EXTERNAL branch uses Alex Demo / alex@example.invalid

Save schedule. Expected: conference exists with scheduled state, can be reopened to add actual details. Auditee dropdown must show eligible auditee users, audit-team dropdown eligible auditors.

ENTRY-02 — Complete all briefing-paper fields before finalizing notes.

Briefing field	Input
Audit selection background	Special request to test synthetic August permit controls after survey identified incomplete sign-off.
Audit authority	DEMO-MO-2026-091 dated T-1; issued AEO code recorded in run sheet.
Preliminary objectives	OBJ-01 assessment accuracy; OBJ-02 receipt matching; OBJ-03 independent reconciliation review.
Scope and exclusions	BPLD August records; excludes Treasury-wide custody and unrelated processes.
Methodology	12-item judgmental sample, walkthrough, recalculation, matching and sign-off inspection.
Audit criteria	BPLD-UAT-SOP-01 sections 1–3.
Planned timing	T..T+14 fieldwork; report planned by T+21.
Team members and roles	Cherrybelle supervisor; Marissa team leader; Charry auditor; Kristine reviewer.
Previous audit matters	No prior findings imported into this synthetic run.
Engagement milestones	Entry; evidence receipt; testing; AFR response; exit; report; CMS handoff.
Expected deliverables	Approved papers, finalized fieldwork, supported AFR, final report and two CMS recommendations.
Initial information requirements	Synthetic permit register, test SOP and reviewer-sign-off records.

Briefing field	Input
Auditee views	Oxanna confirms BPLD will provide the synthetic register and explain reconciliation responsibilities.
Auditee expectations	Clear requests, protected file access and opportunity to comment on supported findings.
Conference notes	Team explained objectives and sample; Oxanna accepted records coordination; no change to approved scope was requested.
Material matters disposition	Records-access matter resolved through CMS upload; no unresolved material restriction.

Matter / commitment field	Input
Matter type / description	Records access / Supply the August synthetic permit and reconciliation register.
Material matter	Checked
Disposition status / disposition	RESOLVED / Oxanna demonstrated that the file can be uploaded through CMS.
Responsible person / office / due date	Oxanna / BPLD / T+2
Agreement / commitment	BPLD will upload the requested synthetic records and retain the request reference.
Commitment person / office / due / status	Oxanna / BPLD / T+2 / COMPLETED after upload, otherwise IN_PROGRESS
CIAS commitment (optional second row)	Charry / CIAS / T+3 / OPEN; "Validate receipt completeness and notify BPLD of gaps."
Held at / actual attendance	Actual test meeting time; PRESENT for the three participants
Attendance notes / attended at	Attended the complete synthetic briefing / actual meeting time
Attachment / caption	Optional criteria file or test minutes / Synthetic entry briefing and attendance record
Notes acknowledgement	Reviewed the official entry notes; they accurately record the synthetic briefing and BPLD commitments.

Use the available hold/complete actions in order, satisfying any participant, notes, material-matter or attachment gates. Sign in as Oxanna → CMS → Entry Conference Acknowledgements. Open the engagement, read notes and acknowledge if offered. Refresh after completion: notes must remain accessible for reference. Empty selector despite correct office/permissions is a FAIL, not expected archival behavior.

15 · Start Fieldwork and activate the program

EXEC-01 — Overview/Lifecycle → Start Fieldwork. Expected FIELDWORK. If blocked, verify completed/waived Entry Conference, approved current package with matching approved/current version, approved AEP/program and current safeguards.

Then open Audit Program → select approved program → Start/Activate. Expected program ACTIVE. Open Execution and Working Papers & Audit Evidence; all three procedures should now be available and new-paper/upload actions enabled for permitted users.

Record both statuses in your run sheet. A planned Working Paper requirement is not an actual Working Paper, and an approved program is not yet an active program. If procedures remain absent after activation, refresh selectors and capture the status/API error as a defect.

16 · Evidence request and Oxanna's CMS upload

EVD-01 — Evidence Management → Evidence Requests → create as auditor.

Request field	Input
Title	August 2026 BPLD synthetic permit and reconciliation register
Purpose	Obtain source records for PROC-01 through PROC-03 and reconcile assessment, receipt and reviewer-sign-off attributes.
Requested from office	BPLD
Requested from user	Oxanna S. Custodio
Due date	T+2
Requested items, one per line	BPLD-UAT-permit-register.csv; BPLD-UAT-criteria-and-authority.txt; confirmation of missing sign-offs for sample IDs 005, 025 and 045.
Change reason	Blank initially; returned update: "Clarified required sign-off columns and sample IDs."
Submit / send comment	Reviewed request scope; send to the BPLD coordinator through the portal.

Create → Submit → use Send when available. Expected SENT. SUBMITTED alone is not sufficient for the auditee delivery workflow.

EVD-02 — Oxanna → CMS → Evidence Requests → select request; acknowledge when available, then upload.

Auditee upload field	Input
Title	BPLD August 2026 synthetic permit register
Source description	Synthetic register supplied by Oxanna S. Custodio for BPLD-UAT-20260908-A; 60 fictional transactions.
Date obtained	T
Response note	Providing the requested register. Sample IDs 005, 025 and 045 have no recorded secondary reconciliation sign-off in this fixture.
File	BPLD-UAT-permit-register.csv

Upload the criteria text as a second response with title "BPLD synthetic SOP and test authority"; source "Test criteria supporting sections 1–3"; note "For demonstration only; not an actual government directive." Expected: response history shows Oxanna, timestamp and exact uploaded file. Auditor sees response linked to the original request; upload is not automatically professional acceptance of evidence.

EVD-03 — Auditor: inspect each file; record receipt if available.

Receipt field	Input
Evidence / document version	Select the returned file and its actual version
Receipt notes	File readable; row count 60; requested columns present; supplied through CMS by BPLD.
Receipt outcome / status	COMPLETE if all requested items are present; PARTIAL if confirmation is still missing
Received form	DIGITAL
Acquisition method	REQUESTED

Do not create a second copy of the same received file just to simulate receipt. If the CMS upload does not expose planning links, retain its request lineage and use the separately prepared auditor analysis file below for precise risk/objective traceability.

17 · Audit evidence metadata, assessment and Working Papers

EVD-04 — Upload `BPLD-UAT-sample-results.csv` as auditor-prepared analysis. For three distinct evidence families, use title suffix Assessment / Receipts / Reconciliation and link OBJ/R/CTRL 01, 02 and 03 respectively. The same fixture contains the documented analysis for all three tests; do not misrepresent it as three independent sources.

Upload field	Input
Title	BPLD 12-item sample analysis — Assessment; repeat Receipts / Reconciliation
Evidence type	Documentary
Source type	Auditor Generated (AUDITOR_GENERATED)
Source description	Recalculation and matching of the 12 defined synthetic samples against the CMS-supplied register and test SOP.
Date obtained	T
Confidentiality	Internal
Acquisition method / form	OTHER / DIGITAL; source description explains auditor-prepared recalculation
Planning objective	Current OBJ-01 / OBJ-02 / OBJ-03
Risk matrix item	Current R-01 / R-02 / R-03
Control reference	CTRL-01 / CTRL-02 / CTRL-03
Custodian name / office	Charry Bagongon / City Internal Audit Office for auditor analysis; original supplied records retain Oxanna / BPLD
Linked Working Papers	Leave blank until papers exist; select corresponding paper if already created
File	BPLD-UAT-sample-results.csv
Change reason	Blank initially; correction: "Corrected analysis description; source fixture unchanged."

Verify files and record checksums. Assess each evidence version used for findings/reporting, including relevant source evidence. The following positive ratings are appropriate only after actually inspecting these fixtures.

Assessment field	Input
Evidence / request / document version	Exact selected evidence; originating request if relevant; actual Core version
Sufficiency	YES — all 12 selected sample rows provided
Appropriateness	YES — records address the specific procedure
Relevance	YES — August BPLD permit controls
Reliability	YES — controlled synthetic fixture reconciles to analysis
Competence	YES — supplied by identified custodian and examined by assigned auditor
Accuracy	YES — recomputation agrees to fixture arithmetic
Completeness	YES — required sample attributes are present; blank reviewer fields are test exceptions, not omitted columns
Corroboration	YES — analysis agrees to register and criteria

Assessment field	Input
Contradiction	NO — no unresolved contradictory source; do not select YES simply because other dimensions are YES
Authenticity / integrity	YES / YES — exact test source and checksum checked
Confidentiality	INTERNAL
Restricted flag / access restrictions	Unchecked / blank for this fixture
Limitations	Blank for this complete synthetic evidence set. The planned judgmental-sample boundary is recorded in scope and Working Papers, not treated as an unresolved evidence defect. If an actual evidence limitation exists, record it and obtain the required exception approval
Evidence gaps	Blank after supplied files are complete
Exception required / reason	Unchecked / blank
Evidence outcome	ACCEPTED
Change reason for reassessment	Resolved prior incomplete rating after comparing all source and sample rows.

Expected: verified/locked evidence and eligible professional assessment. “LOCKED” by itself does not mean accepted for reporting; LIMITED or unresolved gaps should block reporting support. Any nonblank assessment Limitations field triggers an exception requirement in the current service, even a sentence such as “None”; leave it genuinely empty when none exists. For an exception branch, document the real limitation, check Exception required, state the proposed constrained use, and obtain independent approval before relying on the evidence.

Finish the request workflow after assessing its linked submissions: Mark received → Queue assessment → Complete assessment → Close request. Expected CLOSED, complete response history retained. Do not close without submission when Oxanna has actually provided files.

WP-01 — Working Papers & Audit Evidence → New Working Paper. Create three papers, using the returned system codes as actual references.

Paper field	WP-01 input
Procedure	PROC-01
Title	WP-01 — Assessment recalculation
Objective	Verify assessment accuracy for the 12 selected permits.
Procedure performed	Recomputed PHP 1,000 + PHP 100 × transaction number and compared every selected assessment with the register.
Population description	60 synthetic August 2026 permit transactions.
Sample description	IDs 005, 010, 015, 020, 025, 030, 035, 040, 045, 050, 055 and 060; judgmental selection.
Result	12 of 12 assessment amounts agree; zero arithmetic exceptions in the sample.
Conclusion	No assessment calculation exception identified in this sample; no population-wide projection made.
Evidence	Select accepted source register/criteria and Assessment analysis evidence
No-evidence reason	Blank because evidence is linked
Cross-references	OBJ-01; R-01; FLOW-01; PROC-01; actual evidence codes, one per line
Change reason	Blank initially; returned edit: “Added explicit sample IDs and actual evidence references.”

For WP-02 select PROC-02, title "WP-02 — Receipt matching", objective "Verify complete matching receipt references", procedure "Matched sample receipt references and amounts to assessments", result "12/12 unique matching receipt references; zero amount differences", conclusion "No matching exception identified in the 12 samples", corresponding Receipt evidence and OBJ-02/R-02/FLOW-02/PROC-02 references.

For WP-03 select PROC-03, title "WP-03 — Reconciliation sign-off testing", objective "Verify independent reconciliation review", procedure "Inspected reviewer fields for each of the 12 reconciled samples", result "3/12 lack reviewer sign-off: IDs 005, 025 and 045; 9/12 have review. Sample exception rate 25%. No monetary loss established", conclusion "Independent review is not consistently evidenced in this sample; investigate and communicate the control weakness", Reconciliation evidence and matching 03 references. All other population/sample fields remain the same.

Submit each paper, exercise one Return/Resubmit on WP-03, then have an authorized independent reviewer approve. Confirm saved corrected version, APPROVED status, exact evidence links and old version retained.

18 · Fieldwork Records and procedure completion

FW-01 — Execution → choose procedure → New Fieldwork Record. Repeat for each procedure using its corresponding approved paper and evidence.

Field	Input for PROC-03; use corresponding paper narrative for PROC-01/02
Record type	TESTING
Execution status	IN_PROGRESS for draft test; later change to COMPLETED
Procedure / area / focus	PROC-03 / REVENUE / REV-REC
Performed on / location	T / BPLD synthetic test workspace
Objective	Verify independent reconciliation review for the 12 samples.
Procedure performed	Inspected recorded reconciliation and secondary sign-off for all 12 sample IDs; compared exceptions with supplied register.
Population / sample	60 August transactions / the 12 fixed IDs from section 17
Analysis	Three missing sign-offs divided by twelve tested equals 25%; missing review does not by itself establish cash loss.
Result	Reviewer sign-off absent for DEMO-PERMIT-005, 025 and 045; nine other samples have sign-off.
Conclusion	Independent reconciliation review is not consistently documented; develop a supported control finding.
Participant name / role	Charry Bagongon / Assigned auditor
Participant user / office if displayed	Charry / CIAS
Working Papers	Exact approved WP-03 version
Evidence	Accepted source and corresponding verified/locked Reconciliation analysis
Related records	PROC-03; OBJ-03; R-03; actual WP/evidence codes, one per line
Task / assignee / due	Complete reconciliation test / Charry Bagongon / T+14
Change reason on edit	Completed all 12 reconciliation tests and confirmed source links.

For PROC-01/02 use REV-ASS/REV-COLL, corresponding actual approved paper and analysis; carry the zero-exception results/conclusions from section 17. Task titles are “Complete assessment test” and “Complete receipt matching”; deadlines T+7 and T+10.

FW-02 negative: Submit the IN_PROGRESS draft. Expected rejection: execution must be completed. **Recovery:** Edit draft → Execution status COMPLETED → Save new version → Submit. All participants, papers and evidence must remain linked. Record review as eligible independent reviewer, then Finalize as eligible finalizer. Approved linked papers and verified/locked evidence are required for finalization.

FW-03 separate program progress: Finalizing records sets `fieldwork_status` to COMPLETED. The program procedure's `status` is a separate value. Open Audit Procedure Details → procedure progress; set status COMPLETED after its finalized record exists. Supply actual Working Paper reference, the same results/conclusion, review state FINALIZED where offered, related references and comment “Finalized fieldwork and approved support verified.” Leave waiver reason blank. Record procedure review with an available accepted/satisfactory result and comments “Execution and support reviewed.” Verify all three procedure statuses are COMPLETED. Do not merely read the fieldwork badge.

Complete the active program when its completion checks pass. Lifecycle → End Fieldwork / Start Findings Communication. Expected FINDINGS_COMMUNICATION only after all procedures are completed/waived and papers are in terminal review states. Keep every intentional exception supported; do not waive the problematic procedure to bypass this test.

19 · Issue, AFR finding and recommendations

ISS-01 — Create issue from PROC-03 fieldwork or Audit Issues. Exact Working Paper/evidence support must carry forward.

Issue field	Input
Title	Missing independent reconciliation sign-off in three sampled permit records
Exception statement	Three of twelve sampled August synthetic permit records, IDs 005, 025 and 045, have no secondary reconciliation reviewer recorded. Nine have sign-off. The review requirement is in synthetic SOP section 3.
Responsible office / risk rating	BPLD / High, using configured risk label
Working Paper versions	Exact approved WP-03 version
Evidence versions	Accepted Reconciliation analysis, source register and test SOP
Submit / review comment	Sample exceptions and source support are ready for independent validation.

Submit → validate using an eligible reviewer → convert to finding once. Expected issue CONVERTED_TO_FINDING. A second conversion must not create another finding. Use a separate optional issue for dismissal testing, with reason “Corroborating source resolved the suspected duplicate; no exception remains.”

AFR-01 — Open the converted finding and complete all content before communication.

Finding field	Input
Title	Independent reconciliation review not consistently documented
Criteria	Synthetic SOP BPLD-UAT-SOP-01 section 3 requires a named independent reviewer to sign each reconciliation before archival.
Condition	3 of 12 sampled records (005, 025 and 045) lack reviewer sign-off; the remaining 9 have a reviewer.
Cause	Synthetic walkthrough indicates no mandatory reviewer field or exception follow-up checklist at archival.
Effect	Incomplete review evidence increases the risk of undetected reconciliation errors. Testing does not establish an actual monetary loss.
Conclusion	BPLD's synthetic control trail does not consistently demonstrate independent reconciliation review for the tested sample.
Significance classification	Use the supported significant/high control-weakness option; if free text: Significant control weakness
Effect classification	Use supported nonfinancial/control option; if free text: Control assurance
Risk / responsible office	High / BPLD
No-recommendation reason	Blank; two recommendations will be included
Direct creation authority reason/reference	Blank; finding is converted from an issue, not directly created
Source issue / procedures	Converted issue / PROC-03
Fieldwork record / version	Actual finalized PROC-03 record and exact version
Working Paper / evidence versions	Approved WP-03 and accepted reporting support

REC-01 — Add two recommendations before finalization.

Recommendation field	Input
Recommendation 1 text	Introduce a mandatory independent reviewer sign-off checklist for each BPLD reconciliation and retain named reviewer evidence before archival.
Responsible office / target	BPLD / T+30
Recommendation 2 text	Review the three sampled missing-sign-off records, document the review outcome, and perform a monthly completeness check of reconciliation sign-offs.
Responsible office / target	BPLD / T+45

Submit and validate the finding as permitted. Expected: complete criteria-condition-cause-effect-conclusion, eligible support and two saved recommendations. Download/view any generated AFR and verify evidence references and target dates.

20 · Communicate AFR, management response and rejoinder

DIALOGUE-01 — Communicate current finding / create transmittal using available workflow actions. Communication permission alone must not bypass validation.

Communication field	Input
Recipients	Oxanna S. Custodio / BPLD, selecting supported recipient control
Due date	T+5
Confidentiality	INTERNAL
Transmittal method / reference	PORTAL / DEMO-AFR-TX-01
Comment	Request factual confirmation and corrective action for the three documented sign-off exceptions.
Delivery / acknowledgement comment	AFR received for BPLD review and response coordination.

DIALOGUE-02 — Use Oxanna's permitted response workspace or issued-record deep link. CMS currently exposes AEO, Entry Conference and Evidence Request recipient pages; do not assume a general CMS AFR page exists. If Oxanna has no reachable authorized management-response route, mark this step BLOCKED and record the missing navigation/permission rather than writing an auditor response under her name.

Response field	Input
Agreement position	AGREE, using matching configured label
Response kind	ORIGINAL
Management comment	BPLD agrees that the synthetic records 005, 025 and 045 lack recorded secondary sign-off. This does not establish a monetary loss.
Proposed action	Introduce the reviewer checklist, review the three items and perform monthly sign-off completeness checks.
Responsible user	Oxanna S. Custodio
Proposed target date	T+30; keep recommendation 2's T+45 date explicitly in response narrative
Supplemental reason	Blank for initial response; branch: Additional clarification on the monthly monitoring schedule.
Attachment / caption	BPLD-UAT-management-response.txt / Synthetic BPLD corrective action commitments
Submission comment	Submitted for auditor disposition with agreed actions and target dates.

Submit as response author. Auditor Start Review; optional Request Clarification comment "Confirm who performs monthly completeness review" then record a versioned supplemental reply. Extension branch uses requested new due date T+7, justification "Additional time to obtain reviewer confirmation", and an explicit authorized approve/reject decision. Do not extend silently.

DIALOGUE-03 — Auditor rejoinder.

Rejoinder field	Input
Disposition	ACCEPT

Rejoinder field	Input
Rejoinder	The response acknowledges the supported condition and proposes specific actions. Retain both recommendations; implementation will be monitored in CMS after report issuance.
Attachment / caption	Optional sample-results file / Analysis supporting the accepted factual condition
Finalization comment	Dialogue completed; condition and corrective commitments are documented without implying implementation.

Finalize dialogue using an authorized actor, then finalize the finding when allowed. Expected current finding FINALIZED and issue converted. Agreement on a recommendation does not mean implemented. Lifecycle → Start Exit Conference must remain locked until every issue and current finding meets the gate.

21 · Exit Conference: schedule first, actual details later

EXIT-01 — Lifecycle → Start Exit Conference → Conference Management → Exit → Schedule.

Scheduling field	Input
Start / end	T at next actual test session / +60 minutes
Venue	BPLD meeting room — synthetic exit session
Meeting link / online details	Blank for in-person
Agenda	Present supported finding; discuss accepted response; confirm two recommendations and targets; explain CMS monitoring.
Finding IDs	Select the finalized reconciliation finding
Participants	Marissa / CIAS / Team Leader; Charry / CIAS / Auditor; Oxanna / BPLD / Auditee representative
External name / email	Blank for registered users

Expected: SCHEDULED, no requirement to invent minutes at scheduling. Reopen and complete actual details after the simulated meeting.

Completion field	Input
Discussion summary	Participants confirmed the 3/12 sign-off exception and the distinction between control risk and established financial loss.
Minutes	Presented criteria and sample results; reviewed BPLD response; confirmed checklist target T+30 and retrospective/monthly check target T+45; explained CMS follow-up.
Agreements	Retain both recommendations and BPLD ownership; monitor in CMS after final report issuance.
Disagreements	None for this synthetic acceptance path.
Participant attendance status / notes	PRESENT for each / Attended discussion and confirmed assigned responsibilities.
Finding discussion status	Select DISCUSSED / corresponding offered option
Finding agreement status	Select AGREED / corresponding offered option
Discussion notes	Condition and response were reviewed against source evidence.
Agreement details	Two recommendations retained with existing target dates.
Disagreement details	Blank
Revised target date	Blank because no target changes; branch uses T+45 with documented justification
Attachment category / caption	Minutes category offered by form / Synthetic exit meeting record
Attachment file	Optional test minutes fixture, never an unsigned file represented as signed
Acknowledgement status / comment	Acknowledged option / Confirmed that these minutes reflect the synthetic exit discussion.

Complete. Expected COMPLETED and exact finding links retained. If a separate acknowledgement is available, record it using the eligible recipient path; do not assume CMS Entry Conference page also handles exits. Lifecycle → Start Reporting should now pass, including any configured progress-assessment gate.

22 · Draft report and independent quality review

REPORT-01 — Audit Reporting Workspace → Draft Report → create from finalized finding. An interim report is an optional branch, not needed for this run's normal path.

Report field	Input
Title	Draft report — BPLD August 2026 permit control review — BPLD-UAT-20260908-A
Executive summary	Testing of 12 synthetic permit records found no assessment or receipt-matching exception, but 3 records lacked secondary reconciliation sign-off. Two recommendations address review documentation and follow-up. No monetary loss was established.
Confidentiality	Internal
Findings	The finalized reconciliation finding
Issues	Converted source issue if link control is offered
Working Paper versions	Exact approved WP-01, WP-02 and WP-03 versions
Evidence	Current accepted supporting source/analysis versions
Source interim report version	Blank; no interim report in normal path
Interim treatment / source treatments	Blank if no interim source; optional interim branch uses RETAINED_WITH_REVIEW with a stated source-review reason
Source link reason	Selected records support sample scope, results and the retained reconciliation finding.
Approving authority	Blank for draft unless required by the form; final uses section 23
Recipients	Draft may remain blank unless required; final uses section 23
Change reason	Initial draft blank; revision: "Clarified sample limitation and separated risk from monetary loss."

Create these report sections in this order.

Section title	Section content
Background and authority	DEMO-MO-2026-091 authorized this synthetic BPLD control test; actual engagement and AEO codes appear in the record lineage.
Objectives and scope	Assessment accuracy, receipt matching and independent reconciliation review for August 2026 BPLD records; 60 transactions and 12 judgmental samples.
Methodology and limitations	Recalculation, matching, inspection and inquiry; synthetic SOP sections 1–3. Results apply to selected samples and are not statistically projected.
Results	Assessment and receipt testing: 12/12 pass. Reconciliation review: 9/12 pass, 3/12 missing sign-off (005, 025, 045). No quantified monetary loss established.
Management response and recommendations	BPLD agreed to a sign-off checklist by T+30 and review/monthly monitoring by T+45; retain both recommendations for CMS follow-up.
Overall conclusion	The sample demonstrates a documentation weakness in independent reconciliation review; improvements are needed to provide consistent assurance.

Quality checklist: check "Only eligible findings are included", "Evidence and traceability reviewed", "Confidentiality and recipients verified" and "Quality review completed" only after carrying out the checks. Preserve the generated codes/labels.

Save → Submit → authorized Review. Exercise Return with comment "Explicitly state that no monetary loss was established"; revise the summary and resubmit. Approve the draft if offered/required before creating final. Confirm old draft version and review history remain visible.

23 · Final report, authority, issuance and distribution

REPORT-02 — Create Final from the reviewed draft. Retain section content and exact sources, change title to “Final report — BPLD August 2026 permit control review — BPLD-UAT-20260908-A”. Select finalized findings only.

Final-only / authority field	Input
Approving authority	Cherrybelle A. Lao, CIAS Management — authorized test approver
Recipient 1 type / user / delivery	USER / Oxanna S. Custodio / SYSTEM
Recipient 2 type / office / delivery	OFFICE / BPLD / SYSTEM, if supported without duplicating the same recipient
External name / email	Blank for internal recipients
Final change reason	Incorporated independent review and confirmed BPLD commitments for issuance.
Submit / review / approval comment	Final text, source versions, recommendations, targets and recipients checked for controlled issuance.
Issuance date	Actual T on which issuance is performed
Authority role / decision	IAU_HEAD_RECOMMENDATION / RECOMMEND; separately LCE_APPROVAL / APPROVE with actual authorized test actors. Inspect any decisions automatically created by the workflow before adding another
Authority comment / decision reference	Final version reviewed for BPLD distribution / DEMO-FINAL-AUTH-01
Signatory user / role	Actual authorized signer / IAU_HEAD, LCE, PRESIDING_OFFICER or REPORT_ISSUER as applicable; these are document responsibilities
Signatory name / signed at	Blank when a user is selected / actual test signature time
Signature method	CONTROLLED_WORKFLOW for recorded in-app action; never imply a real wet/digital signature
Signature reference	DEMO-FINAL-SIGN-01
Transmittal reference / method	DEMO-FINAL-TX-01 / CONTROLLED_SYSTEM
Transmittal delivery status / sent at / note	SENT after actual portal issuance / actual time / Synthetic final report distributed through controlled portal.
Distribution decision / note	Record delivery when actually visible in portal; acknowledgement only by eligible recipient. Note: Final report made available to BPLD through the test portal.

Submit → independent review of content → Approve → Issue according to allowed actions, satisfying any authority/signatory/distribution readiness shown. The report transition API has SUBMIT, RETURN, APPROVE and ISSUE; independent review is performed through its available review/approval controls, not an invented REVIEW transition. Then verify aggregate ISSUED; use Issue Final Report lifecycle action if still required. The final report must be issued before recommendation transfer. Record actual actors attached to authority decisions and signatories: automatically populated authority labels must not be mistaken for a real mayoral signature.

Download the final PDF and verify title, scope, sample numbers (60,12,3), named office, two recommendations, target dates and version. Check checksum and actor/time history. Attempts to edit issued text must fail; a formal successor/correction must preserve the issued original.

Optional interim branch: create interim report with the same sources and label its limited purpose; independently review it. If carried forward, select its exact version and record RETAINED_WITH_REVIEW or REVISED plus reason. Do not add an interim report mid-run merely to satisfy a blank optional selector.

24 · CMS transfer, reconciliation and handoff acceptance

TRANSFER-01 — Issuance already attempts recommendation transfer in the current implementation. Inspect the transfer result and both recommendation codes first. On the issued final report use Transfer/Retry transfer to CMS to reconcile or recover it. Refresh before retrying; retry is not a second independent handoff.

Handoff field / observation	Expected value
Source engagement	Actual new BPLD-UAT engagement, not AEMS-2026-001
Source report	Issued final report, exact immutable version
Expected recommendations	2
Expected CMS cases	2, one for each recommendation
Responsible office	BPLD for both
Recommendation text	Exact checklist recommendation and retrospective/monthly review recommendation
Target dates	T+30 and T+45
Source finding	Finalized reconciliation finding
Transfer result / identifier	Capture actual keys and timestamps; do not manufacture IDs
Repeat transfer	Same cases reused; total remains 2 for this run

TRANSFER-02 — Engagement → Completion & Transfer → Reconcile. Inspect manifest and resource-effort snapshot.

Reconciliation control	Input / check
Reconcile	Run against the issued source and capture generated manifest/snapshot versions
Transfer manifest	Two eligible recommendations transferred, no unexplained exclusions or duplicates; exact report document version and checksum
Resource effort	Planned 26 days; inspect actual approved ARMIS effort. Do not enter fictional actual effort as if it happened
Variance explanation if actual differs	Synthetic run completed in compressed time; retain actual recorded provider values and explain difference from planned 26 days.
Open exceptions	Resolve underlying source/transfer/provider issues, then reconcile again; capture anything unresolved as BLOCKED
Independent approval comment	Issued report lineage and both BPLD CMS cases reconciled; source counts and exceptions reviewed.
Repeat reconcile	Stable transfer keys; no duplicate case generation

CMS-01 — Sign in as Oxanna → CMS → Recommendation Registry. Find both cases, open each and verify exact wording, BPLD ownership, target, issued-report lineage and visible permitted actions. Open as an unrelated-office user and expect access denied or hidden records. A same-office representative may see office-addressed material; user-specific recipient restrictions must still follow actual delivery policy.

If a compliance monitor must be assigned, use an authorized CMS manager to assign an eligible monitor (for example Marissa, if granted CMS monitoring permission and not barred by independence rules). The auditee must not independently validate implementation or close their own case solely because they can submit evidence.

Handoff endpoint: this guide's main journey passes only when both CMS records exist, remain deduplicated on retry, retain exact AEMS source links and are visible to the appropriate BPLD recipient. CMS action planning and implementation monitoring continue under the CMS workflow; transfer does not equal implemented or closed.

25 · Optional completion/closure and exception branches

After CMS handoff, inspect Completion Assessment and formal Closure without claiming that transfer automatically closes the engagement. Complete the assessment's checklist from actual evidence, resolve open exceptions, obtain independent approval, then follow the formal closure route if included in your test scope.

Optional branch / fields	Synthetic input / expected result
Completion assessment narrative	All three procedures completed, approved papers and finalized fieldwork linked; two recommendations transferred. Record any unresolved provider exception honestly
Completion assessment evidence	Actual issued report version, transfer manifest, current effort snapshot and final work index
Formal closure reason	Authorized test closure after required completion gates are satisfied
Final index / retention reference	BPLD-UAT-FINAL-INDEX-01; use the actual configured retention class and custody office, never invent an official retention period
Closure checklist	Mark items only after actual review; independent review and approval must be recorded
Suspension	Reason: Test interruption for records availability; authority DEMO-SUSP-01; effective T; review T+2; resume requirements: Files supplied and access verified
Resume	Reason: Required test records are now available; return only to recorded prior stage
Cancellation	Reason: Duplicate synthetic run; authority DEMO-CANCEL-01; effect on IAP: None, special test; disposition: Preserve evidence/history, discontinue draft work
Formal revision	Reason: Corrected narrative or traceability; prior approved/issued version remains immutable
Waiver of conference	Separate branch only; reason: Authorized simulation branch; authority and support as required. Do not use waiver to hide incomplete normal-path testing
Reopening	Separate authorized scenario; select actual closure and authority document version, state correction need and retain original closure history

The optional branches are independent test cases. Execute potentially disruptive branches on a duplicate fresh test engagement, not the successfully transferred main run.

26 · Negative, persistence and access regression matrix

Record actual messages and whether any partial data was written. Expected rejection must preserve prior saved versions.

Test ID / action	Expected result
NEG-01 Create without special authority/date	Validation blocks creation; no partial engagement
NEG-02 Select two offices	Rejected; engagement remains single BPLD office
NEG-03 Select another area's focus	Rejected or absent from selector
NEG-04 Team work while DRAFT	Locked until Prepare Authorization
NEG-05 Missing/stale safeguards	Authorization/fieldwork blocked with actionable reason
NEG-06 Self-review without explicit permission	Rejected even for copied role name or management title
NEG-07 Clone role with same permitted actions	Scoped allowed actions work without relying on original role code; team/office constraints remain
NEG-08 Plan draft without program	Draft creation succeeds in permitted planning stage; approval still blocked until complete
NEG-09 Save matrix text	Methodology, appetite and conclusion persist in each matrix after refresh
NEG-10 Add risk without objective/procedure/paper	Readiness fails; cannot approve/start fieldwork with incomplete links
NEG-11 Approved program not activated	Execution unavailable/empty; activation restores eligible procedures
NEG-12 Evidence obtained tomorrow	Validation rejects future obtained date
NEG-13 Request SUBMITTED but not SENT	Oxanna should not be treated as having received a sent request
NEG-14 Unrelated-office request upload	Hidden or denied; no foreign response or evidence created
NEG-15 Unsupported/oversize file	Clear rejection, no orphan visible response
NEG-16 Reopen completed entry notes	BPLD can read authorized historical notes
NEG-17 IN_PROGRESS fieldwork submit	Rejected; COMPLETED saved execution version can submit when other requirements pass
NEG-18 Finalize with unapproved paper	Rejected until linked paper approved
NEG-19 Complete procedure before finalized fieldwork	Rejected; separate procedure progress completion required afterwards
NEG-20 LOCKED evidence with unresolved assessment	Not eligible for reporting merely because locked
NEG-21 Contradiction YES	Unresolved contradiction blocks positive reporting eligibility
NEG-22 Issue conversion repeated	No second finding from same source conversion

Test ID / action	Expected result
NEG-23 Exit during fieldwork/unresolved AFR	Locked until lifecycle and finalized dialogue requirements pass
NEG-24 Start reporting before exit completion	Rejected
NEG-25 Transfer unissued report	Rejected; no CMS case created
NEG-26 Retry transfer/reconcile	No duplicate CMS cases; source lineage stable
NEG-27 Edit old approved/issued version	Rejected or read-only; formal revision preserves prior text
NEG-28 Two tabs edit same version	Second stale save rejected; refreshing recovers current version
NEG-29 Private file anonymous download	Denied; no public storage bypass
NEG-30 Auditor vs auditee permissions	Auditee can supply requested files but cannot professionally approve evidence or issue audit report
NEG-31 Browser responsiveness	At 390px and desktop widths, all fields, save buttons and validation text are reachable
NEG-32 Audit trail	Saves/transitions/transfer record actual actor, target record, time and version

27 · Troubleshooting and known verification boundaries

Symptom	Check / next action
Planning conformance Blocked at draft	Expected until package prerequisites complete. Create draft, finish AEP/program/traceability, then approve
Focus selector empty	Refresh engagement scope and verify saved REVENUE + three focus selections. If still absent, capture a scope-to-selector defect
Matrix text disappears	Record exact matrix code and before/after text; failure of persistence, not normal versioning
Execution shows no procedures	Check current program is ACTIVE, same engagement selected and view/execute permissions present
Cannot submit fieldwork	Edit Execution status to COMPLETED and save new version; then submit. Check participant/paper/evidence links
End Fieldwork still blocked	Check program procedure status, not only fieldwork status. Complete procedure progress with actual WP reference after finalization
Evidence says LIMITED	Review professional assessment and unresolved gaps; locked file is not automatically accepted support
CMS request missing	Confirm SENT/delivered state, BPLD office, Oxanna recipient, permissions and refreshed session
CMS entry notes missing	Completed record should remain readable if authorized; capture engagement ID, user office and endpoint result
Missing approve/review button	Verify actual permission, record state, team/office scope and separation policy; role name alone is insufficient
No AFR reply path for Oxanna	Record navigation/permission gap; CMS Evidence Requests is not a generic AFR response page
Reporting progress control blocks	Record required status/reference against configured planning control. Missing UI control is a defect, not grounds to bypass validation
Reconciliation blocked by ARMIS	Verify actual approved resource data and provider health; planned figures do not substitute for provider actuals
API error after save	Capture visible message and server log correlation; never count an error toast as successful save

Some older repository workflow documents omit Entry/Exit lifecycle stages or describe older approval assumptions. This guide uses current transition services as the operational reference. It does not certify compliance with COA, NGICS or PGIAM; professional rules must be validated against the applicable authoritative documents separately.

28 · Final run sheet and source index

Record / result	Tester fills actual value
Run, date, environment, tester	_____
Engagement / AEO / acknowledged by	_____
AEP / Audit Program / active version	_____
Planning package current and approved versions	_____
OBJ/Flow/Risk/Procedure codes reconciled	_____
Entry Conference / historical CMS visibility	_____
Evidence Request / Oxanna responses	_____
Evidence / professional eligibility / exact versions	_____
WP-01/02/03 actual system codes	_____
Fieldwork record codes / finalized versions	_____
Three procedure statuses COMPLETED	_____
Issue / finding / finalized dialogue	_____
Recommendations 1 and 2 / due dates	_____
Exit Conference / completion time	_____
Final report / issued version / checksum	_____
CMS case 1 / case 2 / retry count	_____
Manifest / effort snapshot / approval	_____
Failed/blocked cases and defect references	_____
Overall outcome / reviewer / date	NOT RUN / PASS / FAIL / BLOCKED — _____

Source files checked for this guide (paths relative to repository root):

- `backend/config/demo.php` and `src/pages/shared/LoginPage.jsx`: actual demo identities and card behavior.
- `backend/app/Services/Aems/AemsEngagementTransitionService.php`: aggregate stage transitions and gates.
- `backend/app/Http/Requests/Aems/`: engagement, scope, evidence, working-paper, fieldwork, issue and finding validation.

- `backend/app/Http/Controllers/Api/Aems/`: AEO, AEP, program, planning package, conferences, dialogue, reports and transfer fields/actions.
- `backend/app/Services/Aems/AemsPlanningPackageService.php`: planning readiness and version relationships.
- `backend/app/Services/Aems/AemsFieldworkService.php` and `AemsProgramService.php`: execution completion versus procedure status.
- `backend/app/Services/Aems/AemsEvidenceService.php` and `AemsEvidenceRequestService.php`: eligibility and evidence-request response behavior.
- `src/pages/aems/`: form labels, record selectors and displayed workflow controls.
- `src/pages/cms/CmsEvidenceRequestsPage.jsx`, `CmsEntryConferenceAcknowledgementsPage.jsx` and `src/config/navigation.js`: auditee entry points.
- `docs/AEMS_WORKFLOW_DESIGN.md`, `docs/AEMS_GOVERNANCE_AND_ACCEPTANCE.md` and `docs/END_TO_END_TESTING_GUIDE.md`: supporting repository references; current service gates take precedence for testing behavior.

All unlisted search/filter controls are navigation aids, not business content: select the new engagement, current program/version, matching record type and blank search to show all records. Optional external recipient/contact fields remain blank on this internal BPLD path. Generated metadata and hidden concurrency values are managed by AGIS. For any additional configured custom field, record its label, selected master-list value and actual outcome as an environment-specific addendum.
